

# Handy Cricket Interface Component Quick Connection Set-up

Classroom  
Project

This connector will make it easy for you to do several different projects and then connect them up to the Cricket Interface for programming and testing of your projects. Review the different fischertechnik components you may be working with and see how they connect to the Handy Cricket Interface through the use of the Quick Connect Fanning Connector. You might want to take a few minutes and study this diagram before starting your Cricket Interface project.

(You will need to get 6 of the connectors to do the lab demo projects)
